

SOC Incident Investigation Report

1. Incident Summary

A possible brute-force attack was detected on a Windows system after multiple failed login attempts were followed by a successful login and privileged account access.

2. Incident Details

Field	Details
Incident Type	Brute Force Attack
Severity	High
Affected System	Windows Workstation
Detection Source	SIEM / Windows Security Logs
Date & Time	Sample Investigation

3. Investigation Findings

- Detected multiple Event ID 4625 entries indicating failed login attempts.
- Observed Event ID 4624 showing a successful login after repeated failures.
- Event ID 4672 confirmed elevated administrative privileges were assigned.
- Source IP activity suggested possible unauthorized access attempts.

4. Actions Taken

- Disabled the affected user account temporarily.
- Reset account password and enforced MFA.
- Blocked suspicious source IP address at firewall level.
- Escalated incident to Incident Response team for deeper analysis.

5. Recommendations

- Enable account lockout policy after multiple failed logins.
- Monitor Event IDs 4624, 4625, and 4672 regularly.
- Implement endpoint detection and response (EDR) solutions.
- Conduct regular user awareness training against phishing attacks.

6. Conclusion

The activity pattern strongly indicates a potential brute-force compromise attempt. Immediate containment actions reduced further risk, and continued monitoring is recommended.
